

KATANA X

by Red20RC

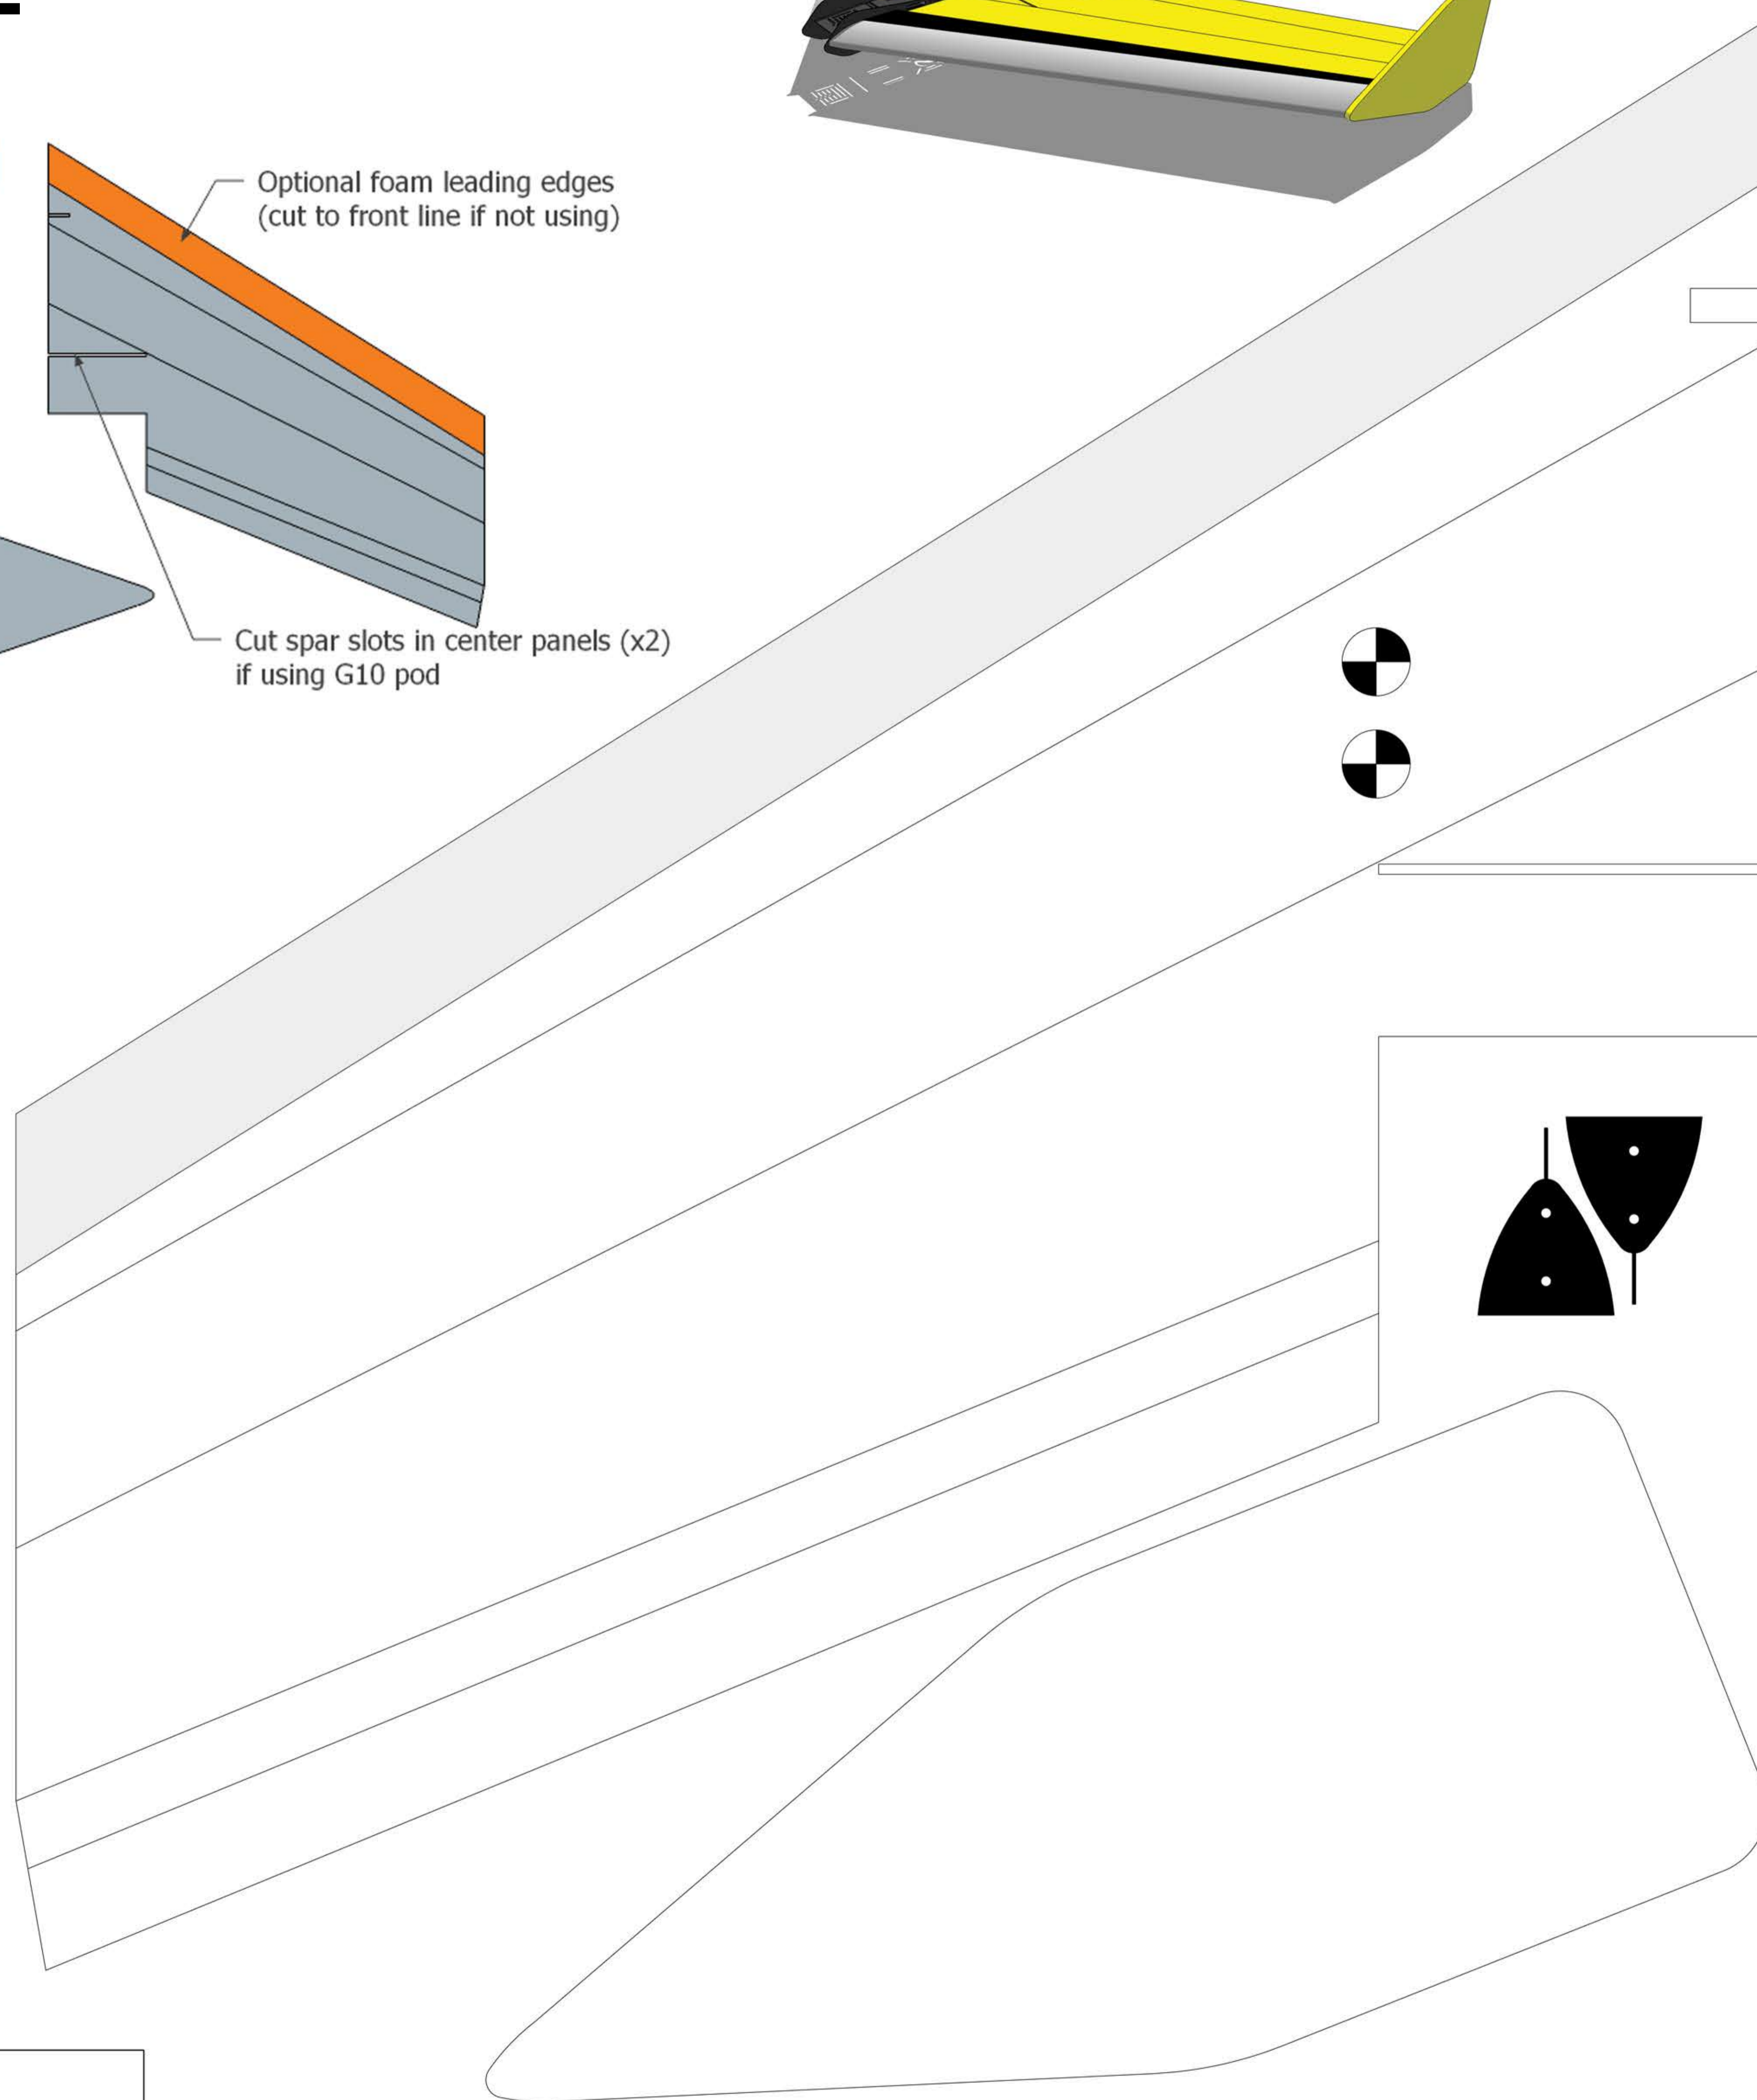

Span: 1100mm
 5mm foam board
 CG: 190-220mm

The Katana X is a slightly more advanced KfM6 wing made from 5mm foam board but featuring moulded foam leading edges.

On the original these were hotwire cut using the black templates shown on the plan.

The elevons feature a KfM step on the underside to create the equivalent of a reflexed wing section.

Scale
